**DETAILED ACTION**

***Response to Arguments***

Applicant's arguments with respect to the rejected claims have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 102***

Claims 7-11,15-19,21,22,28,29 are rejected under 35 U.S.C. 102(b) as being anticipated by Bielagus. The figure shows confronting rolls performing a compressive function on pulp material.

***Claim Rejections - 35 USC § 103***

Claims 12-14,23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bielagus. The limitations of these claims would have been obvious design choices only once the basic apparatus was known. For example, the type of roll support used would have been a design choice based on several factors such as material being treated and space requirements.

Claims 20,24-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bielagus in view of Long.

Claims 20,24-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bielagus in view of Long. Bielagus does not use a conveyor belt as part of his compression zone which limits material movement control. Long solves this problem by disclosing similar apparatus including the use of a conveyor belt. In order to provide for improved material flow control, it would have been obvious for one of ordinary skill in the art to modify Bielagus by providing a conveyor belt, taught to be desirable by Long.
